DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:
2. Claim 1 recites:

A method for magnetically recording information in a magnetic recording medium that includes a magnetic recording layer:

The vertical component extending from the write head to a magnetically soft underlayer disposed under the magnetic recording layer; and

Writing a longitudinal orientation in the magnetic domain in the magnetic recording layer by generating a horizontal component of magnetic flux in the magnetic recording layer using the write head.

Claim 5 recites:

Guiding the magnetic flux through the magnetic recording layer at an angle having a vertical component and a horizontal component with the vertical component being smaller than the horizontal component, the vertical component lowering a dynamic coercivity of a selected region of the magnetic recording layer and the horizontal component writing a longitudinal orientation in the selected region.

Claim 9 recites:

A magnetically soft underlayer and wherein a thickness of the magnetically soft underlayer and a thickness of the non-magnetic spacer layer are designed to guide

Art Unit: 2653

magnetic flux from the longitudinal write head through the magnetic recording layer at an angle having a vertical component and a horizontal component with the horizontal component being larger than the vertical component.

Claim 14 recites:

A magnetic thin film magnetic recording medium on the disk including a magnetic recording layer for longitudinal recording with an easy axis of magnetization in the plane of the layer, a non-magnetic spacer layer, a magnetically soft underlayer and wherein a thickness of the magnetically soft underlayer and a thickness of the non-magnetic spacer layer are designed to guide magnetic flux from the longitudinal write head through the magnetic recording layer at an angle having a vertical component and a horizontal component with the horizontal component being larger than the vertical component.

3. The closest references (US Patents 5750270 and 6320725) disclose a method of writing perpendicularly to magnetic media using longitudinal means, by lowering the coercivity of the magnetic media using the magnetic head. The present invention discloses a method of writing longitudinally to a disc with magnetic soft underlayer designed to guide the magnetic flux through the media.
4. Claims 1, 5, 9 and 14 are not anticipated by, nor made obvious, over the prior art of record.
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
